

PROJECT REPORT: A WELL FOR MFRANTA

Clean Drinking Water for the Village Community in Eastern Region, Ghana

100%

WATER ACCESS

80

BENEFICIARIES

90 m

DEEP WELL BOREHOLE

€5,500

TOTAL FUNDING

1 PROJECT OVERVIEW & KEY DATA

Project Title	A Well for Mfranta (Clean Drinking Water for the Village Community)
Project Location	Mfranta Village, Eastern Region, Ghana
Project Partner (South Partner)	Amediewu Honey Foundation in cooperation with contribYOUte gGmbH
Target Group	Approximately 80 residents of Mfranta Village
Project Duration & Timeline	3 Months (Successfully Executed: Late 2022)
Total Funding Amount	EUR 5,500.00 (100% Disbursed & Verified Expenditure)

2 INITIAL SITUATION & PROBLEM STATEMENT

"The well construction in Mfranta stands as one of contribYOUte's earliest milestone projects, marking a significant step toward sustainable infrastructure development and immediate quality-of-life improvements."

The Situation Before Project Start:

- Geographical Isolation:** Mfranta is located deep within the rural Eastern Region of Ghana, accessible only via narrow footpaths, and cut off from neighboring communities during the rainy season by a surging river.
- Precarious Water Supply:** During dry months, the village had no access to water whatsoever. All utility water had to be hauled manually on a daily basis from distant neighboring villages.
- Health & Daily Burden:** The lack of clean water severely compromised hygiene and health for the ~80 residents, while placing an immense physical burden on daily life.

3 IMPLEMENTATION & LOGISTICAL CHALLENGES

At the request of the village community, contribYOUte funded the construction of a dedicated deep well. Implementation was carried out in four main phases:

1. Geological Site Assessment: Identification of the optimal drilling location using precise magnetic field measurements by a specialist geologist.

2. Material Procurement: Sourcing specialized gravel filter materials and high-durability piping systems.

3. Logistical Pioneering Work: Deployment of a bulldozer to widen the access path after

4 RESULTS & IMPACT

The successful completion of the borehole yielded direct and lasting benefits for the entire village:

- **Comprehensive Water Supply:** Immediate, year-round access to clean, fresh drinking water directly within the community for all ~80 residents.
- **Health Protection & Disease Prevention:** Effective protection for the population—especially young children and the elderly—against waterborne diseases and infections.
- **Relief & Development Opportunities:** The strenuous physical labor of daily water retrieval is eliminated. Women and children save hours every day, which are now redirected toward education and income-generating activities.

5 FINANCIAL REPORT & BUDGET BREAKDOWN

All project funds were deployed exclusively for construction, logistics, and technical materials:

EXPENSE CATEGORY / ITEM	DETAILS & OPERATIVE IMPLEMENTATION	AMOUNT (EUR)	SHARE (%)
Geology & Site Analysis	Magnetic field measurement & geological survey report	€450.00	8.18 %
Access Path & Heavy Machinery	Bulldozer deployment for road widening & river crossing	€850.00	15.45 %
Deep Well Drilling (90m)	Drilling truck setup, chiseling & flushing the aquifer	€2,400.00	43.64 %
Piping Systems & Filtration	Gravel filter material, casing pipes, wellhead & pump	€1,300.00	23.64 %
Project Management & M&E	Local construction supervision & quality assurance by Amediewu	€500.00	9.09 %
TOTAL EXPENDITURE (Mfranta Project)		€5,500.00	100.00 %

6 CONCLUSION & ACKNOWLEDGMENTS

The Mfranta well project demonstrates how targeted funding (€5,500) combined with trusted local partners like the **Amediewu Honey Foundation** can sustainably transform lives and secure long-term development for an entire community.

We extend our sincere gratitude to all donors, partners, and the dedicated community members on the ground who made this life-changing project possible.

Location, Date: Blaubeuren / Mfranta, 2023

Project Leads: Hannah Werner (contribYOUte gGmbH) & Amediewu Honey Foundation
