

TLF Delivery Car Project

During the pandemic, we are starting to run out of donors while this organic farming training program for vulnerable youths must continue. We don't want to lose hope for vulnerable youths across Indonesia to study with us.

One of the efforts we make to cover our operating costs is to increase the sales of vegetables from our farm. We started to offer more vegetables to our partners. Many of them that we offer are interested in buying so that orders are increasing. However, the problem is that we only have one unit of an old grand max car for the delivery of our customer orders because most of our customers are in the DKI Jakarta area. The distance between the Farm and the DKI Jakarta area is around 200 km, which is quite far.

In addition, to increase the delivery capacity and to maintain the quality of vegetables, we need 1 more car equipped with a cooler. We plan to buy 1 Unit Mitsubishi L300 and we complete it with a Box Body which is worth USD 24,472. We have collected money from various donors for this project but the money is still far for 1 unit of the car.

It will be very helpful if we can get this car because it increases our vegetable sales. In this way, in the long term, we cover our operational needs from sales.
